a precinct electronic voting system for use in elections having
program logic resident at the controller for selecting and disseminating portions of the electronic ballot information between the controller and the voting station on a voter-specific basis to facilitate cooperable display, the cooperable interaction being directed by the program logic to assist the voter during the election.

The references also fail to teach
a vote recording device including
electronic ballot information including control information that establishes links between defined ballot elements to govern ballot navigation in a predetermined way by movement of a ballot focus to indicate a selected ballot element.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
